

WRAP YOUR APP WITH KORE

In the evolving landscape of healthcare technology, managing patient information and monitoring outside clinical settings has become crucial. Our solution is designed specifically for healthcare technology providers who require reliable, secure, and long-lasting devices to collect and process vital health information for clinical trials or hospital-at-home scenarios. By offering tailored devices and comprehensive services, we enable seamless remote patient monitoring, free from the limitations of traditional consumer devices.

KEY PAIN POINTS ADDRESSED

1. **Lack of Complete Control Over Device Fleet:** Healthcare providers often struggle with maintaining a consistent and secure device environment. Consumer devices come with varying software and hardware configurations, making management and control challenging.
2. **Ensuring Continuous Access to Vital Health Information:** Downtime or device malfunctions can lead to critical gaps in data collection. This compromises the integrity of health information and the quality of care provided to patients.
3. **Supporting Diverse Patient-Owned Devices:** When patients use their own devices, healthcare providers face challenges in diagnosing and resolving issues due to the unknown and varied nature of these devices.

Global Enterprise Mobile Devices:

One device for global deployments, supporting over 75+ countries. Long product life cycle & supply chain in comparison to consumer devices. Enhanced security & updates & TAA compliant.

Operating System with Managed Updates:

Avoid unexpected disruptions with controlled OS updates, preventing sudden firmware changes that could render devices unusable.

Zero Bloatware:

Devices with no unnecessary apps or software that consume valuable system resources. This ensures optimal performance, focusing only on your healthcare application.

Global Connectivity:

Devices pre-configured, ready to activate and operate wherever needed. Healthcare providers can deploy devices quickly and efficiently, regardless of location.

Comprehensive Logistics and Lifecycle Management Services:

End-to-end services to streamline the deployment and management of your devices, including:
