

KORE Business Connect: Cellular Failover and Out of Band Management (OOBM)

In today's competitive economy, the importance of continuous network connectivity cannot be understated. Costing businesses approximately \$26.5 billion annually, episodes of service interruptions are highly unpredictable and the results are often disastrous.

Causes of Network Outages:

- Natural disasters
- Cyber security hacks
- Road work and construction
- Periodic, planned maintenance
- IT issues or errors

Effects of Network Outages:

- Inability to process payments
- Decreased employee productivity
- Inability to access or update cloud-based customer information
- Lapse in critical data back-ups
- Customer dissatisfaction and damage to brand reputation
- Disruption to routine and emergency network maintenance

As more and more mission-critical applications are stored in the cloud, it is becoming of increasing importance for IT professionals and business owners alike to consider and implement a failover solution for their connectivity needs.

KORE's end-to-end 4G LTE failover solution ensures business continuity by providing protection against costly network outages and increasing network availability. This comprehensive offering bundles cellular-enabled routers with cellular connectivity, so that in the event of a primary internet or landline failure, cellular data is converted to Ethernet for a seamless failover to 4G LTE.

Features & Benefits

Reduce downtime costs with our streamlined solution.

Assured Business Continuity and Reduced Cost of Downtime

Enterprise-Class Security

Turnkey Shipment for Quick Speed to Market

Single Partner for Solution and Support

Customizable Solution to Meet Unique Customer Requirements

Solution Overview

4G LTE Cellular Connectivity from Tier 1 Operators

Routers and/or Gateways, from Leading Manufacturers

Professional Services and 24/7/365 Customer Support

Best-in-Class Connectivity Management Platform

Ideal for These Industries:

- Healthcare
- Industrial
- Retail & Hospitality
- Financial Services

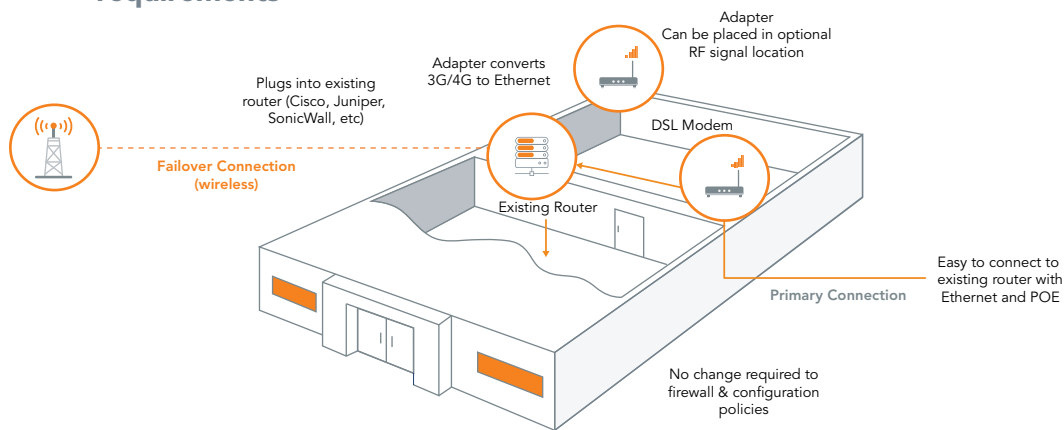

24/7 Remote Access

Out of Band Management (OOBM)

With an optional configuration, the KORE Wireless Failover Solution offers 24/7 remote access to critical network components for IT personnel to remotely manage:

- Firmware updates and upgrades to optimize the performance of your solution and maintain the highest levels of security
- Remote troubleshoot in the event of performance degradation or outage
- Network diagnostics, configurations, and adjustments on the fly

A turnkey solution, customizable to your requirements
